

Ressichem Procurement System

User Manual — Complete Workflow & How to Use

Version 1.0 · Prepared for Ressichem internal use · July 2026

Purpose. This manual describes the end-to-end procurement workflow in the Ressichem Procurement portal: Local buying, Import buying, and Export documentation — including purchase requisitions, purchase orders, purchase receipts, supplier invoices, payments, PFI, and costing.

1. Table of contents

1. System overview
2. Roles & access
3. Master data (Suppliers & Items)
4. Local & Import buying cycle
5. Purchase Requisition (PR)
6. Purchase Order (PO)
7. Purchase Receipts
8. Supplier Invoices & matching
9. Payments
10. Landed costing
11. Import PFI path
12. Export workflow
13. Status reference
14. Quick reference URLs

2. System overview

The portal is divided into three trade areas:

Area	Purpose	Main modules
Local	Domestic (Pakistan) purchasing	Suppliers, Items, Requisitions, Purchase orders, Purchase receipts, Supplier invoices, Payments, PR Reports, Landed costing
Import	Foreign purchasing	Same as Local, plus Upload PFI & Document
Export	Outbound sales documentation	Create PFI, Received PFI, Documents Upload, Shipment Details

Note: Local/Import cover the buy cycle (procure-to-pay). Export is documentation-only and does not use PR / PO / receipts / invoices / payments.

3. Roles & access

Role	Typical actions
Requester	Create and submit purchase requisitions; view PR status
Approver	Approve, reject, or hold submitted PRs for assigned departments
Buyer	Manage suppliers/items; create PO from PR; issue PO; receive goods; invoices; payments; PFI; costing
Admin	Full access, including Users and PR Approvers mapping

Department → approver routing is configured under **PR Approvers** (admin).

4. Master data (Suppliers & Items)

4.1 Suppliers

- Create and maintain vendor records before raising POs.
- Country determines Local vs Import (Pakistan suppliers appear under Local).

4.2 Items

- Maintain the procurement item catalog.
- Each item has a trade scope (local / import) used when building PR/PO lines.

5. Local & Import buying cycle (complete)

This is the standard procure-to-pay flow:

```
PR draft
  → Submit (submitted)
  → Approve / Reject / Hold
  → Create PO (draft) from approved PR
  → Issue PO (issued)
  → Purchase receipt (partial or received)
  → Supplier invoice → Match
  → Payment (partial or paid)
  → Optional: Close PO / Landed costing sheet
```

6. Purchase Requisition (PR)

Module: Requisitions

Step	Status	Who	Action
1. Create	draft	Requester	Add department (title), lines, save
2. Submit	submitted	Requester	Sends PR to department approver; notification sent
3a. Approve	approved	Approver	PR ready for PO conversion
3b. Reject	rejected	Approver	Reason required; requester may edit & resubmit
3c. Hold	held	Approver	Reason required; can Release back to submitted, or Approve/Reject

Editing is blocked while status is submitted, held, or approved.

7. Purchase Order (PO)

Module: Purchase orders

7.1 Create from approved PR

1. Open an **approved** PR.
2. Click **Create PO**.
3. Select the **supplier** (required — PRs do not store supplier).
4. System creates a **draft** PO with PR lines and links (`prNumber` / requisition).

POs can also be created manually, or (Import) converted from a received PFI.

7.2 Issue

From draft, click **Issue** → status becomes `issued` . This is the official purchase order.

7.3 Receive

On an issued (or partially received) PO, click **Receive**:

- Enter quantity received per line (remaining qty is pre-filled).
- Post purchase receipt.
- PO becomes `partial` if any lines remain open, or `received` when all quantities are received.

7.4 Close

After receive, use **Close** to set status `closed` when the order is complete operationally.

8. Purchase Receipts

Module: Purchase receipts

- Each receive action posts a purchase receipt document (number like `GRN-YYYY-#####`).
- Receipts list shows receipt #, linked PO, supplier, date, lines, and value.
- Supports full and partial receipts against the same PO over time.

9. Supplier Invoices & matching

Module: Supplier invoices

1. Create a supplier invoice (optionally link to a PO).
2. Enter supplier invoice number, date, and total (or inherit PO total).
3. Click **Match** to compare invoice total with PO total / received value.

Match result	Meaning
matched	Invoice aligns with PO / received amounts
variance	Amounts differ — review before paying
unmatched	Not yet matched / no PO linked

10. Payments

Module: Payments

1. Open **Payments** → add payment.
2. Select supplier invoice; remaining balance is suggested.
3. Enter amount, date, method (bank transfer, cheque, cash, LC, other), and reference.
4. Post payment → invoice becomes `partially_paid` or `paid`.

11. Landed costing

Module: Landed costing

- Separate cost sheet for duties, charges, FX, and landed cost calculations (especially Import).
- This is **not** the same as recording a supplier payment.
- Use after/alongside import purchases for cost analysis and print/export.

12. Import PFI path

Module: Upload PFI & Document

Upload received PFI

- Review / accept as ready
- Convert to PO (draft)
- Issue → Purchase receipt → Invoice → Payment
- (+ Landed costing as needed)

Import can also skip PFI and use the standard **PR** → **Create PO** path.

13. Export workflow

Export is independent of the buy cycle:

Create PFI

- Received PFI (as needed)
- Documents Upload
- Shipment Details

Use Export for outbound commercial documents and shipment tracking — not for purchasing stock.

14. Status reference

14.1 Purchase Requisition

draft → submitted → approved | rejected | held

14.2 Purchase Order

draft → issued → partial → received → closed

14.3 Purchase Receipt

posted

14.4 Supplier Invoice

Workflow: draft → matched → partially_paid → paid

Match flag: unmatched | matched | variance

14.5 Payment

posted

14.6 PFI

draft / sent / accepted / converted / rejected / cancelled

15. Quick reference URLs

Replace host with your server (e.g. `http://192.168.13.166:3000`):

Screen	Local path	Import path
Dashboard	/procurement	
Requisitions (PR)	/procurement/local/pr	/procurement/import/pr
Purchase orders	/procurement/local/po	/procurement/import/po
Purchase receipts	/procurement/local/grn	/procurement/import/grn
Supplier invoices	/procurement/local/invoices	/procurement/import/invoices
Payments	/procurement/local/payments	/procurement/import/payments
Landed costing	/procurement/local/costing	/procurement/import/costing
PR Reports	/procurement/local/reports	/procurement/import/reports
Upload PFI	—	/procurement/import/pfi-received
Export PFI	/procurement/export/pfi	
PR Approvers (admin)	/procurement/department-approvers	

16. End-to-end examples

16.1 Local purchase

1. Requester creates & submits PR (Local).
2. Department approver approves.
3. Buyer clicks **Create PO**, selects Pakistan supplier, issues PO.
4. On delivery, buyer **Receives** (full or partial) → purchase receipt posted.
5. Buyer records **Supplier invoice**, runs **Match**.
6. Accounts/buyer posts **Payment** until invoice is paid.
7. Optionally **Close** the PO.

16.2 Import purchase via PFI

1. Upload received PFI under Import.
2. Convert PFI to draft PO → Issue.
3. Receive shipments (partial OK) → invoices → match → payments.
4. Maintain landed costing sheet for duties/charges/FX.

16.3 Export

1. Create export PFI.
2. Upload documents and maintain shipment details as goods leave.

Ressichem Procurement System — User Manual

Internal document. Workflow reflects the system as implemented (PR → PO → Purchase receipt → Invoice → Payment for Local/Import; Export is documentation-only). For access issues, contact a Procurement Admin.
